

Renewable Power and Optimizing Savings with *InCharge* as a Service

INCHARGE AS A SERVICE

Take advantage of CaaS. Your capital costs now become operational, by paying as you use. Pay either by mile of EV driven or by kWh consumed by the chargers, on a monthly or quarterly basis. InCharge also works with OEMs that lease EVs, to provide conventional and FMV leasing, and monetize 8911 credits as part of the lease process. We take care of all maintenance and warranty of chargers, keep them running with our In-Control Software, and will even provide certain uptime guarantees. No surprises on pricing, so you can plan well for the future.

GENERATE REVENUE WITH LCFS CREDITS FROM YOUR EV CHARGERS

InCharge can automate the complex task of obtaining LCFS credits for you. Most companies that own EV chargers are eligible to generate Low Carbon Fuel Standard (LCFS) credits, which can be traded on the energy market. InCharge has created a seamless process to help you optimize up to 45% more LCFS credits to expand your electrification programs. We will also make sure the source of energy you are consuming for charging is 100% green.

Option A

Get Cash

Option B

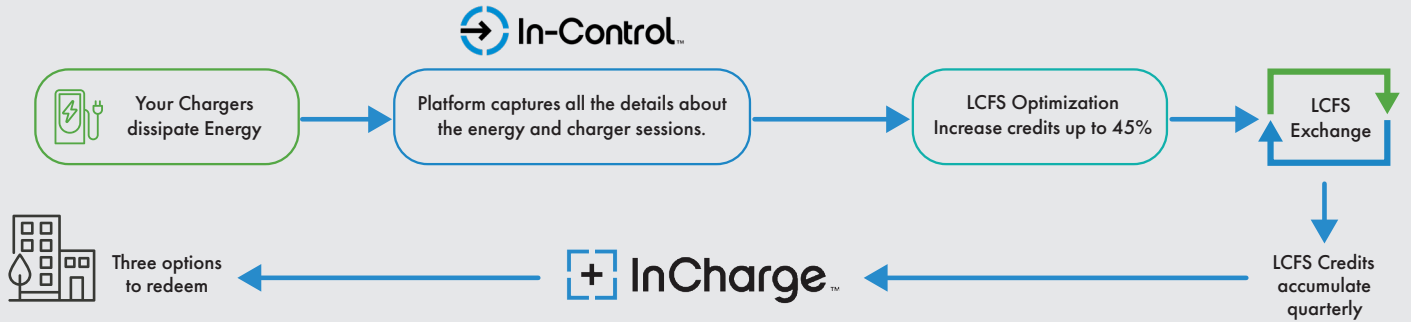

Use for future hardware purchases with InCharge

Option C

Use for future service and software plans with InCharge

HOW TO OPTIMIZE YOUR LCFS CREDITS

We do the work for you.

START USING CARBON FREE POWER FROM DAY ONE

Our InCharge Carbon Free Power program can help your business become 100% green. Any organization that uses an HVAC system is generating atmospheric pollutants. The energy used to power EV chargers often comes from coal – another carbon emitter. InCharge can enable your business to go carbon neutral beyond EV charging with RECs to offset your organization’s carbon emissions. RECs can help even the most mindful organizations achieve carbon neutrality.
